MIDAS

Market Intelligence & Decision Analytics System

"Everything you touch turns to gold." — King Midas

NotebookLM

The Bionic Upgrade

JetBrains Mono

Standard Bot

JetBrains Mono

MIDAS

We are not rewriting your battle-tested strategy. We are wrapping it in a protective shield of intelligence.

18

Lines of Code Changed

The only modification required to your existing logic

Investment Profile

- Hardware: $949 (One-time)
- Operating: $123 / month
- Break-even: 2-3 months

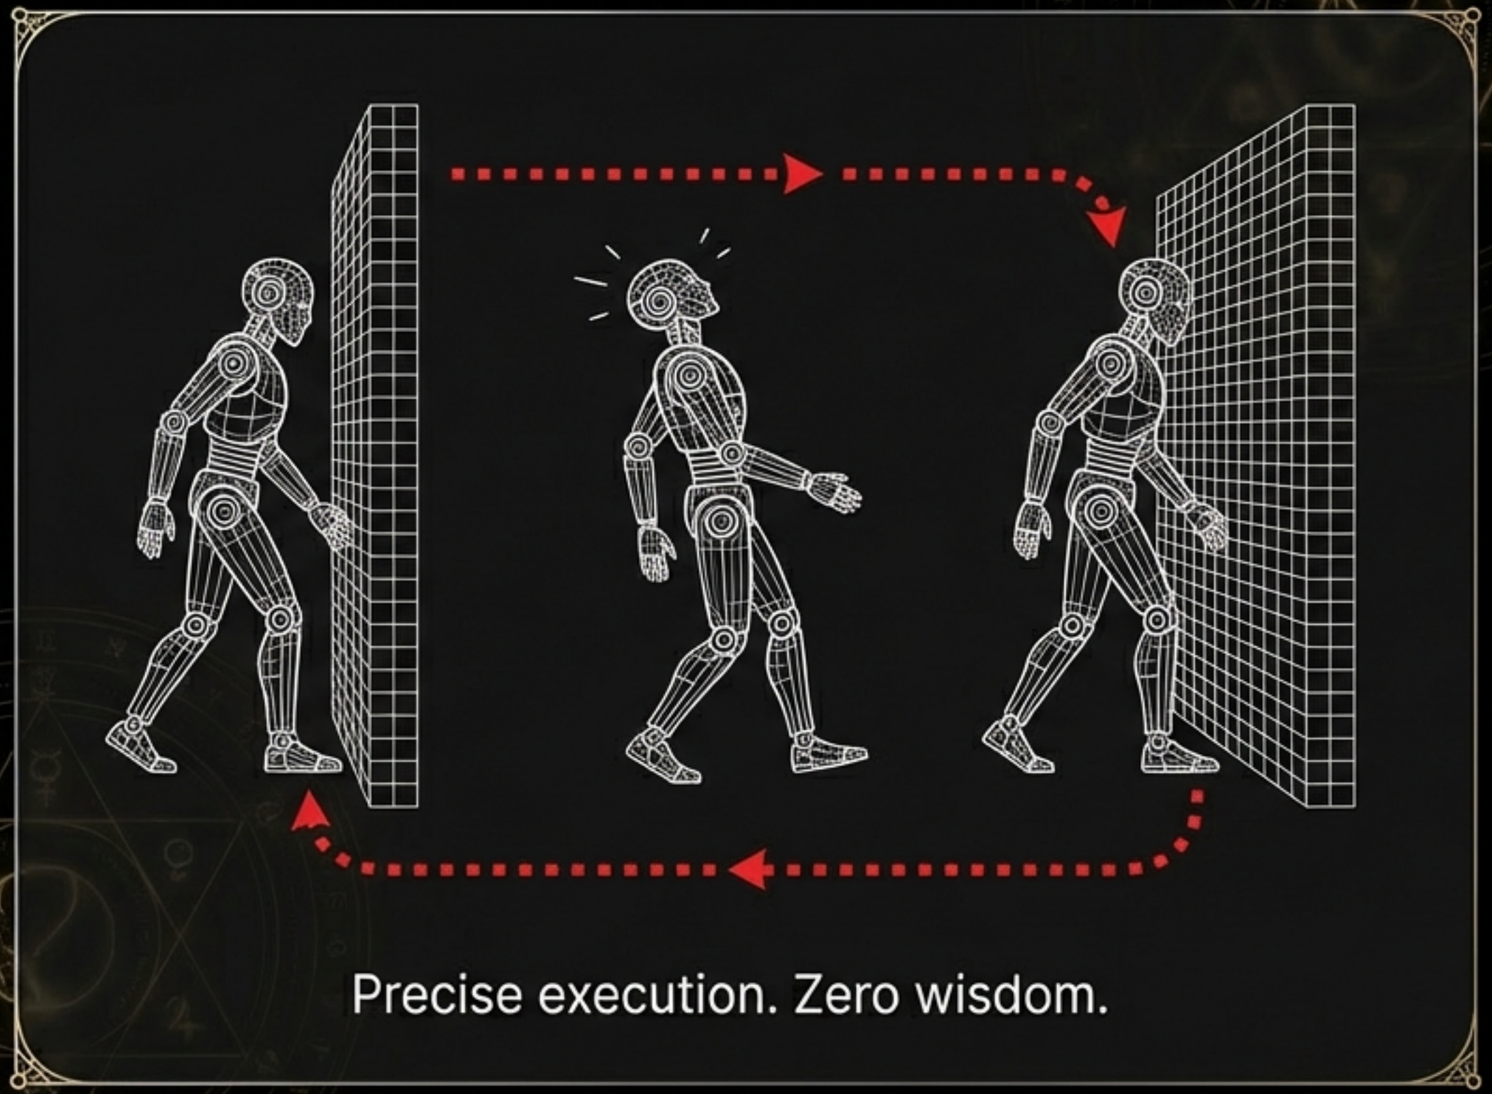

Performance Goal

40% reduction in repeated mistakes

8 Weeks to full autonomy

NotebookLM

The Problem: Algorithmic Amnesia

Precise execution. Zero wisdom.

Current Failures

✕ No Memory

It doesn't know it lost money on this exact setup last week.

✕ No Sight

Trades blindly into FOMC, NFP, or CPI events.

✕ Static Nature

It is the exact same bot today as it was a year ago. It does not learn.

The Result: It bleeds gold.

NotebookLM

Intelligence Around, Not Inside

The MIDAS Wrapper

Context Awareness
(Memory)

Compounding Wisdom
(Learning)

News Protection
(Sight)

Philosophy:
We do not touch the core logic.
We wrap it in layers of situational awareness.

Execution stays fast; decision-making becomes deep.

NotebookLM

System Hierarchy: The Three Pillars

The Soldier

Role: Execution Layer

Speed: Fast Loop (Microseconds)

Mantra: “I execute orders with precision.”

The General

Role: Strategy & Protection

Speed: Strategy Loop (30 mins)

Mantra: “I watch the battlefield and assess risk.”

The Coach

Role: Deep Learning

Speed: Learning Loop (Nightly)

Mantra: “I review performance and optimize the plan.”

NotebookLM

Layer 1: The Soldier

Python 3.11 // Gemini Flash (Fast AI)

Old Loop

MIDAS Loop

Integration: 18 lines of code changes total.

“Degrades gracefully. If MIDAS services fail, the Soldier keeps trading without superpowers.”

NotebookLM

Layer 2: The General

ForexFactory Scraper // Volatility Regime Logic

The News Filter

Looks ahead 4 hours for high-impact events (CPI, NFP, GDP).

Blocks entries +/- 15 minutes around event windows.

Regime Detection

Calculates ATR percentile every 30 minutes to classify the market:

[LOW] - [MEDIUM] - [HIGH] - [EXTREME (Red Warning)]

Action: Adjusts position sizing or blocks trading entirely based on volatility.

NotebookLM

Layer 3: The Coach

Claude Opus 4.5 (Deep AI) // Nightly Batch Jobs

Nightly Routine 5:30 PM

1: Wake Up & Fetch

Pulls today's closed trades.

2: Analyze

Reviews trade against rules.

3: Embed

Updates Vector Database with the lesson.

4: Report

Emails trader a daily performance breakdown.

"The system wakes up smarter tomorrow than it was today."

NotebookLM

The Memory: Total Recall

ChromaDB // Vector Embeddings

Before taking a trade, MIDAS queries:
"Show me the last 50 trades that looked like this."

If last 10 similar trades lost money → **[REJECT]** (Risk Management)

If last 10 similar trades won → **[INCREASE SIZE]** (Conviction)

NotebookLM

Anatomy of a Trade

Digital Alchemy // JetBrains Mono

10:00:00 AM

Soldier detects Setup (BOS+FVG) in Inter

10:00:01 AM

General confirms no News. Memory Memory confirms 60% Win Rate on similar.

10:00:05 AM

EXECUTION. Trade taken. Log saved to TimescaleDB.

02:00:00 PM

Exit at Take Profit.

05:30:00 PM

The Coach reviews the win, tags it ‘Clean Trend’, and embeds the lesson into ChromaDB.

NotebookLM

Built on Iron to Create Gold

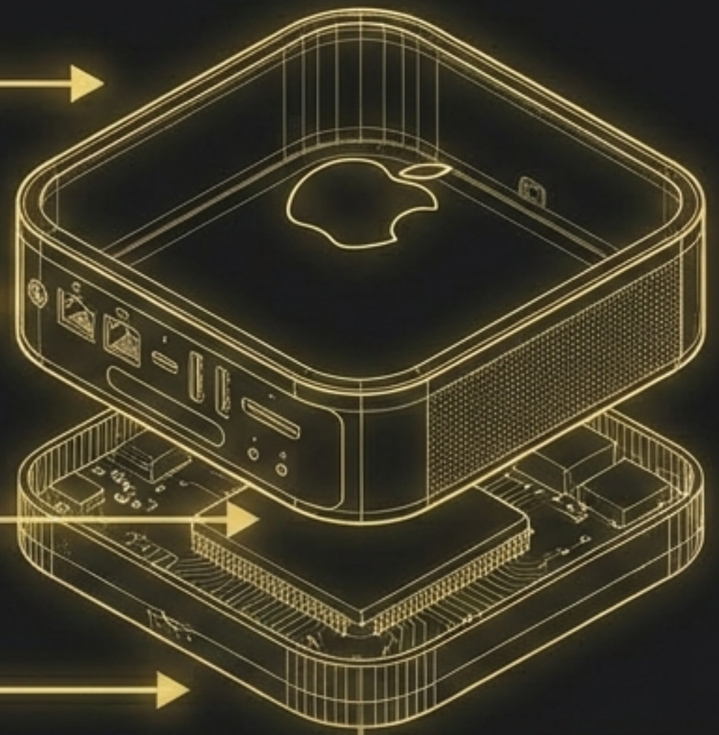

Digital Alchemy // JetBrains Mono

Mac Mini M4
(16GB RAM)

Zero Latency
(Internal Network)

Data Privacy
(Owned Hardware)

Fixed Cost

Orchestration: Docker Compose

AI Models: Gemini 1.5 Pro (Speed) + Claude Opus (Depth)

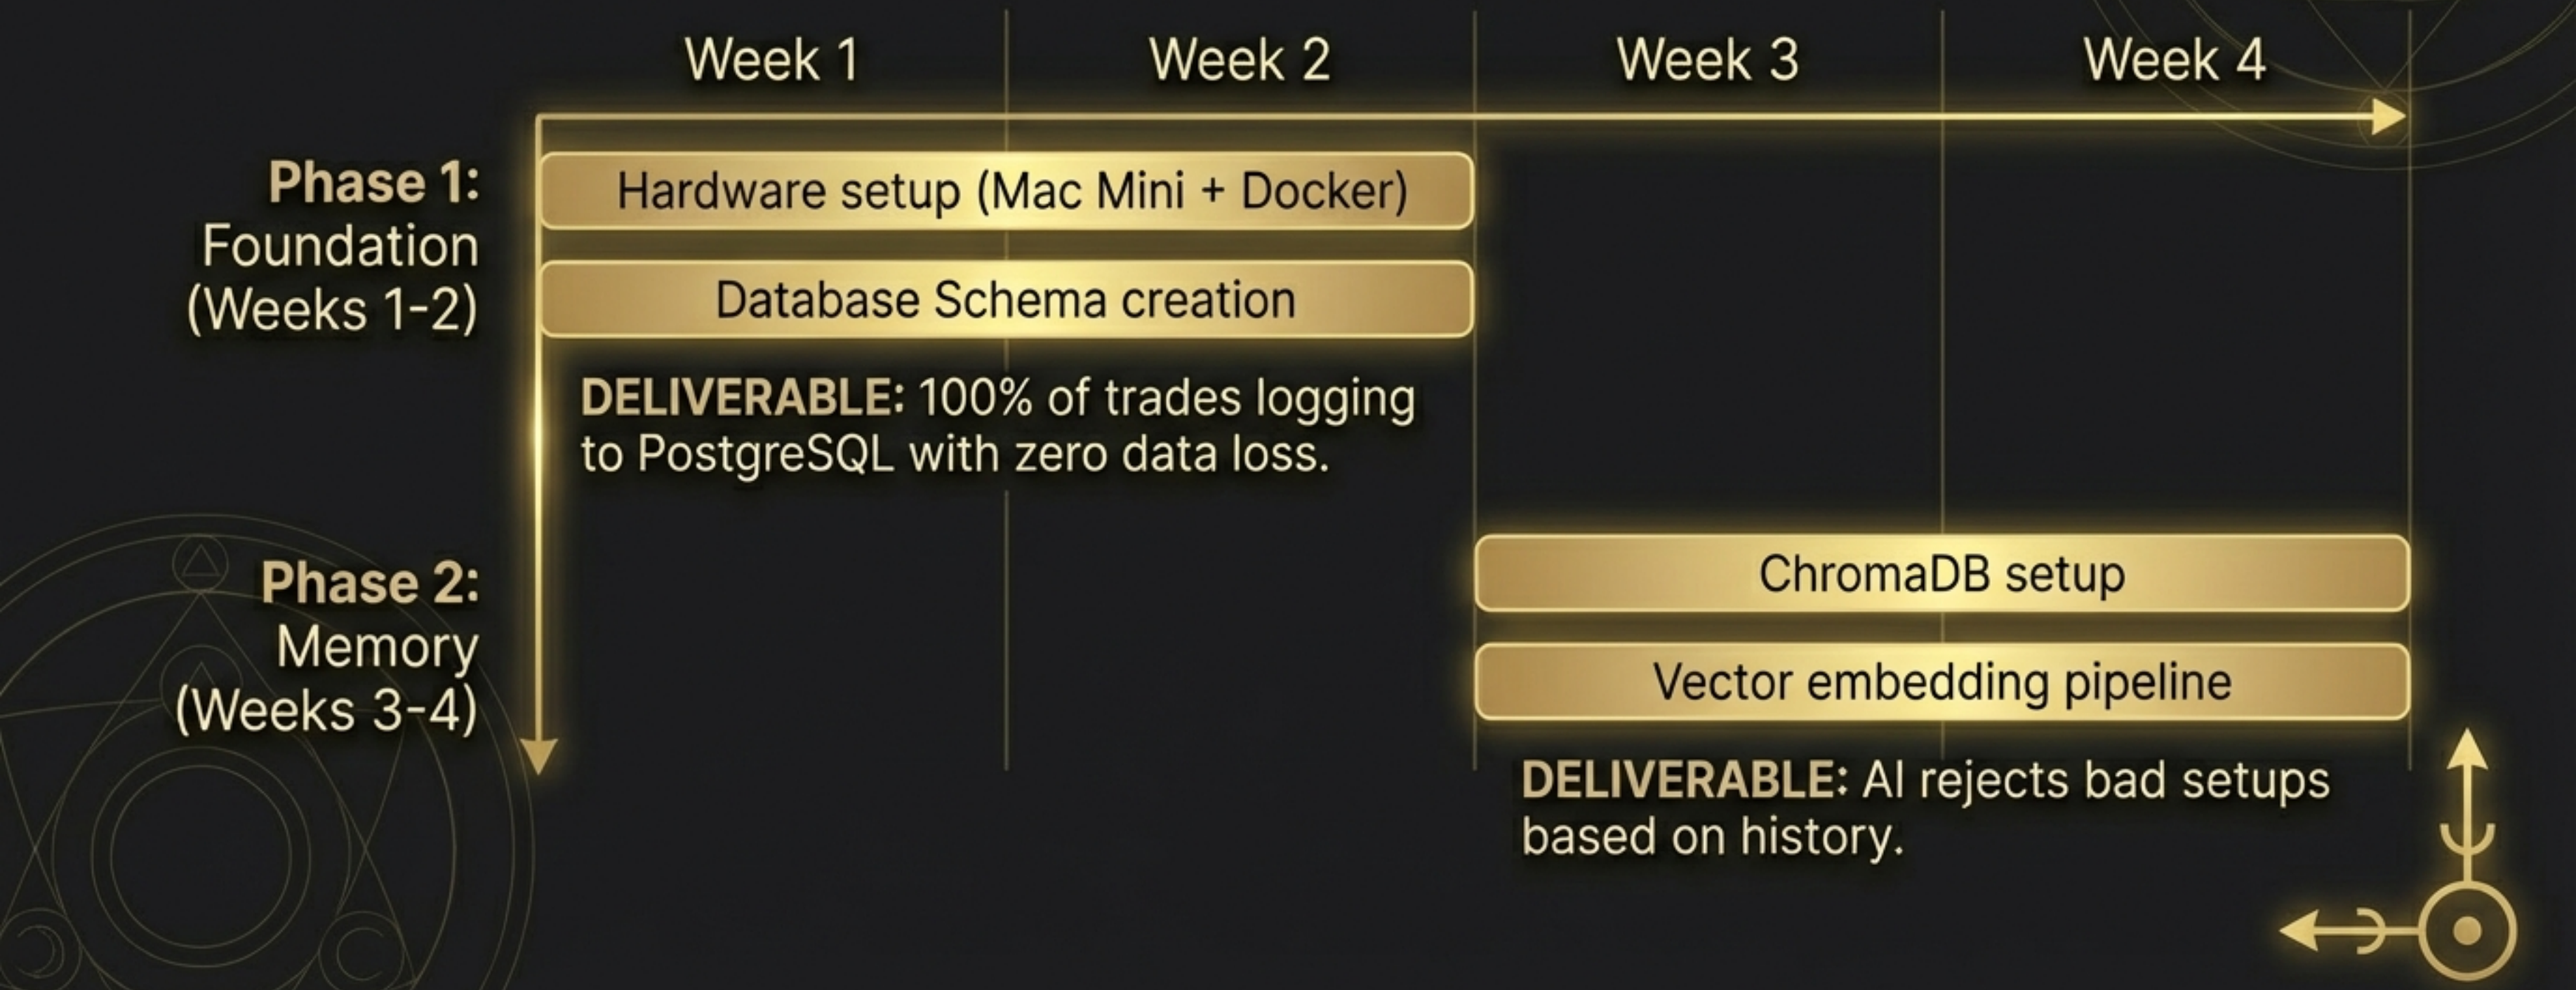

Databases: TimescaleDB (Logs) + ChromaDB (Vectors) + Redis (Cache)

Safety: UPS Battery Backup (30 min runtime)

NotebookLM

Investment & ROI Analysis

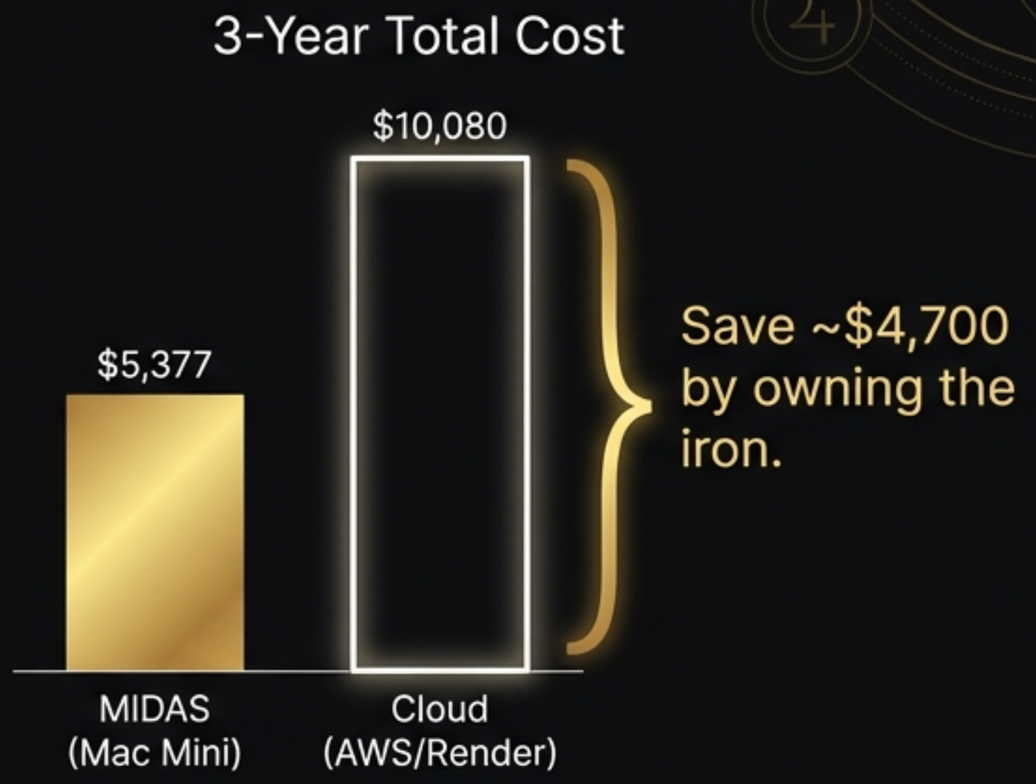

Why own the hardware?

Upfront: $949

(Hardware)

Operating: $123 / month

(AI + Data)

ROI: Break-even requires preventing just 2 bad trades per month.

NotebookLM

Let’s Build the Future

- No more repeated mistakes.
- Context-aware decisions.
- Continuous wealth compounding.

Order the Mac Mini today.
Begin the transformation.

Your bot used to touch setups. Now it turns them into gold.
